### **AIRCRAFT TSCM**

Blake Technical SARL carry out comprehensive TSCM electronic countermeasure searches **specifically geared for Corporate Aircraft.**

Corporate aircraft of all sizes are frequently used as mobile offices and meeting rooms when airborne, or static on the ground. They are often landed at low profile airfields for servicing and engineering works with little or low security. In addition, many corporate aircraft are chartered or leased under fractional ownership or time share schemes. In this regard they are prone to electronic eavesdropping equipment that can be disguised as the normal electronic and avionic equipment onboard and wired using avionic cabling and connectors. Blake Technical SARL has the experience and knowhow to carry out specialised searches on most corporate aircraft including:

- Bombardier Global (all models)
- Bombardier Challenger (all models)
- Bombardier Learjet (all models)
- Gulfstream G4, G4SP & G5 G550/650
- Hawker 800 & 800XP
- Dassault Falcon 2000
- Dassault Falcon 7X & 8X
- Boeing Business Jet (BBJ & BBJ2)
- Airbus Corporate Jetliner
- Airbus 319/320
- Airbus A330 / A350
- Cessna Citation (all models)
- Boeing 787 Dreamliner
- Boeing 777 / 767

Using 'state of the art' equipment we carry out searches for conventional and non-conventional eavesdropping devices including those using digital transmission mediums and modern GSM based devices. We also search for covert digital audio & video recording systems which may become active when the aircraft is airborne.

GSM Based Audio Eavesdropping Device discovered on a major Corporate Jet Aircraft at a major UK airport

**All search personnel are certified Airside by ESSIMA to FAA & EASA standard and on aircraft type.**
